Criterion: 7- Institutions Values And Best Practices.

Key Indicator: 7.1 Institutional Values And Social Responsibilities.

Metric: 7.1.2 :- DVV CLARIFICATIONS

DVV CLARIFICATIONS SOUGHT

1. HEI needs to furnish substantiated documentation for asserting its claim for the thematic areas of
 - a. "Alternate Sources of Energy and Energy Conservation Measures,"
 - b. "Management of Diverse Categories of Degradable and Non-Degradable Waste," and
 - c. " Disabled-friendly, barrier free environment".

Moreover, HEI need provide GEO-TAGGED PHOTOS of disable friendly washrooms, and restrooms.

P.O. - MAJDIA, DIST. NADIA PIN - 741507 WEST BENGAL, INDIA.

A. "Alternate Sources Of Energy And Energy Conservation Measures,"

1. Replacement of Ordinary High-Energy Lights with Energy-Efficient LED Lamps

One of the most effective ways to conserve energy is by replacing traditional high-energy lights with energy-efficient LED lamps. LEDs consume significantly less power compared to incandescent or fluorescent lights. They also have a longer lifespan, reducing the frequency of replacements and the associated waste. The benefits of LED lamps include:

- **Reduced Energy Consumption:** LEDs use up to 75% less energy than incandescent bulbs.
- **Longer Lifespan:** LEDs can last up to 25 times longer than traditional bulbs.
- **Lower Heat Emission:** LEDs produce very little heat, reducing cooling costs.
- **Environmental Benefits:** Lower energy consumption translates to reduced greenhouse gas emissions.

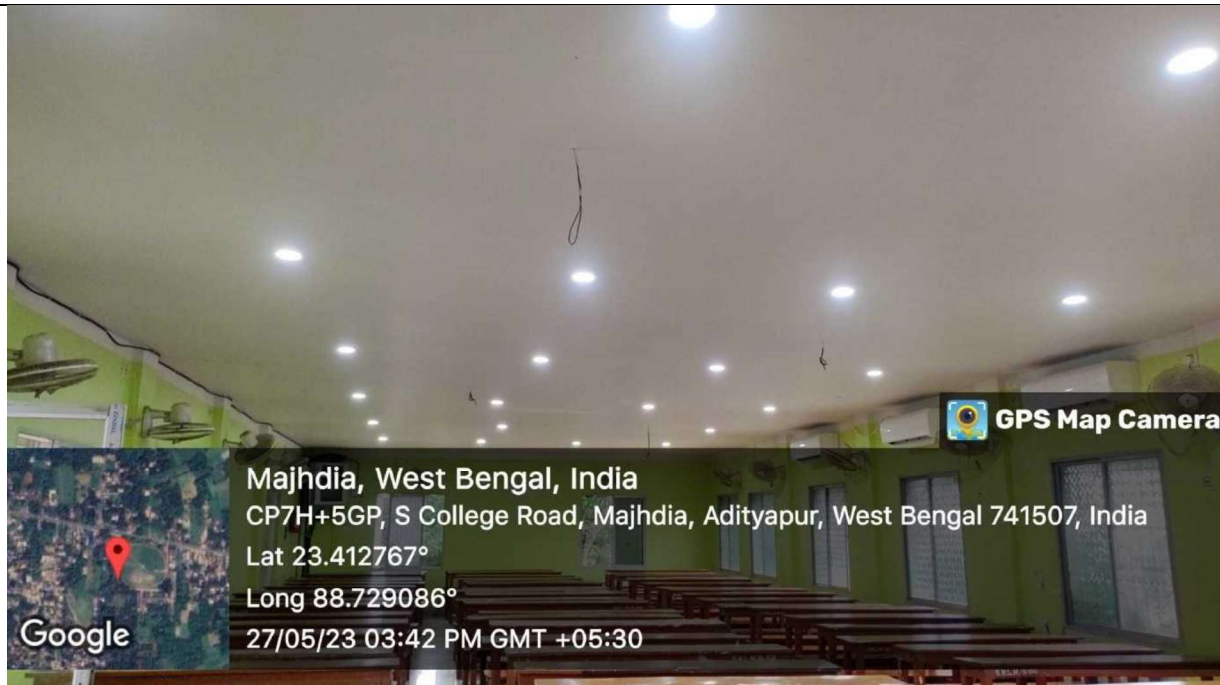

2. Sensor-Based Water Pump and Reservoir System

Implementing sensor-based water pump and reservoir systems can greatly enhance water and energy efficiency. These systems use sensors to monitor water levels and demand, ensuring that pumps operate only when necessary. The benefits include:

- **Optimized Water Usage:** Sensors ensure that water is pumped only when needed, reducing waste.
- **Energy Savings:** Pumps operate more efficiently, leading to significant energy savings.

Reduced Wear and Tear: Less frequent operation extends the lifespan of pumps and reduces maintenance costs.

Use of LED bulbs/ power efficient equipment

B. "Management Of Diverse Categories Of Degradable And Non-Degradable Waste,"

Effective waste segregation is crucial for managing waste efficiently. The use of colored garbage bins aids in identifying and separating different types of waste. Green bins are designated for biodegradable waste, such as food scraps and garden refuse, promoting composting and soil enrichment. Blue bins collect recyclable materials like paper, cardboard, and certain plastics, facilitating recycling processes. Red bins are used for non-recyclable and non-degradable waste, including sanitary products and ceramics, ensuring these materials are disposed of properly to prevent environmental harm.

Collaboration with local governing bodies like the Panchayat Samiti and Gram Panchayat enhances waste management efforts. These partnerships ensure regular waste collection, preventing health hazards from accumulation. The institution is also planning to set up a liquid waste treatment plant to properly manage wastewater before its discharge into the environment. Until the plant is operational, collaboration with local authorities is essential to handle the liquid waste effectively.

For e-waste, the institution already collects and stores electronic waste separately, ensuring its proper handling. Future plans include working with certified recyclers to ensure safe recycling of electronic components. Joint awareness programs with the local authorities will continue to promote waste segregation, recycling, and responsible disposal among the community.

C. " Disabled-Friendly, Barrier Free Environment".

The college is dedicated to providing inclusive infrastructure and services to support students with physical disabilities. Ramps are available across the campus, enabling easy access to classrooms, libraries, and other facilities. Additionally, wheelchairs are provided for students who require assistance with mobility. For visually impaired students, the college offers Braille books and catalogs, along with low-vision software and supportive audio systems, ensuring that educational materials are fully accessible.

To further enhance accessibility, the college has specially designed toilets that cater to the needs of physically challenged students, offering comfort and safety. Additionally, for students with writing disabilities, amanuensis services are provided during examinations, allowing them to complete their exams effectively. The college also takes proactive measures for differently-abled students by assigning home centers for exams, reducing travel stress and ensuring a comfortable and supportive environment. These efforts reflect the college's commitment to creating an inclusive learning environment.

3. Refer to policy enacted by Ministry of Environment, Forest and Climate Change Notification on "Battery Waste Management Rules, 2020" & "E-Waste (Management) Rules, 2016", & "Solid Waste Management Rules, 2015". HEI needs to provide receipts for the sale of various forms of e-waste to third parties, and evidence on safe & Effective handling of Used Batteries

The institution adheres to the guidelines set forth by the Ministry of Environment, Forest and Climate Change under the "Battery Waste Management Rules, 2020," "E-Waste (Management) Rules, 2016," and "Solid Waste Management Rules, 2015." However, the institution does not currently generate a significant amount of e-waste, and there has been no sale of e-waste to third parties. As the institution does not have a solar power system, it does not produce bulk amounts of used batteries.

The institution ensures that e-waste, including used computers and peripherals, is stored separately in a designated area to ensure safe handling and prevent environmental hazards. Although no e-waste has been sold to third parties so far, the institution is planning to sell its accumulated e-waste in compliance with the relevant regulations, ensuring proper documentation and receipts for the sale, along with evidence of safe and effective handling of used batteries.

4. HEI needs to provide clear version of A. Geo-tagged photographs of the Rain harvesting tank mentioned, if any, along with the dimensions of the tank in meter unit, B. Geo-tagged photographs of the solar panels, etc.

A. Geo-tagged photographs of the Rain harvesting tank

At Sudhiranjan Lahiri Mahavidyalaya, Majdia, we have implemented an efficient **rainwater harvesting system** to contribute to sustainable water management practices on our campus. This system includes one large open pond with dimensions of **40 ft x 18 ft** (approximately **12.19 meters x 5.49 meters**) and two smaller ponds, each with dimensions of **20 ft x 15 ft** (approximately **6.1 meters x 4.57 meters**). Additionally, two small concrete tanks have been constructed to increase our water storage capacity. The harvested rainwater is utilized for **groundwater recharge** and for **gardening purposes** on the campus, helping us reduce our reliance on external water sources while promoting green and eco-friendly initiatives. This system aligns with our commitment to environmental conservation and resource management.
